between positive and negative reactions of informal caregivers of people with dementia and health outcomes across eight European Countries. Background Caring for someone with dementia may have implications for the caregiver's own health and for the care recipient. Mon, 31 Oct 2016 23:53:00 GMT The association between positive and negative reactions of ... - Many family caregivers report positive experiences from caregiving, including a sense of giving back to someone who has cared for them, the satisfaction of knowing that their loved one is getting excellent care, personal growth and increased meaning and purpose in one's life. Positive Aspects of Caregiving - Positive aspects of caregiving in dementia have been identified as important in understanding the experiences of carers, yet the research base lacks clear definitions of key concepts. Qualitative research explores carers' experiences of positive aspects of caregiving in rich detail which lends itself to supporting theory development. The positive aspects of caregiving in dementia: A critical ... -
